Project Title:Income Tax Estimation and Deduction Calculation System

Course: Java Programming

Student Name & Roll No:
Hindhupriya (25bcs117)

Department: Computer Science

Mentor/Guide: Mr.Aravind

TECHNICAL TEAM

KG COLLEGE OF ARTS AND SCIENCE

Java Programming Project Presentation

Introduction

- This project is a Java-based application to calculate income tax.
- It helps users estimate tax based on income and deductions.
- Reduces manual calculation errors.
- Useful for individuals and small businesses.

TECHNICAL TEAM

KG COLLEGE OF ARTS AND SCIENCE

Java Programming Project Presentation

Objective

- To develop a tax calculation system using Java
- To automate tax estimation process
- To apply OOP concepts
- To improve accuracy and efficiency

Java Programming
Project Presentation

Problem Statement

- Manual tax calculation is complex and time-consuming
- Difficult to apply correct tax slabs and deductions
- High chances of calculation errors
- Need for a simple automated solution

TECHNICAL TEAM

Java Programming
Project Presentation

System Requirements

- Hardware:
- Processor: Intel i3 or above
- RAM: 4 GB

- Software:
- OS: Windows / Linux
- Language: Java
- IDE: Eclipse / NetBeans / IntelliJ

TECHNICAL TEAM

Java Programming
Project Presentation

System Design

- User Input Module
- Income Processing Module
- Deduction Calculation Module
- Tax Calculation Module
- Output Display Module

  - Include:
  - Flowchart
  - Block Diagram
  - Algorithm

TECHNICAL TEAM

Java Programming
Project Presentation

Module Description

- Input Module:
- Accepts user income details
    - Processing Module:
    - Calculates total income
    - Applies deductions
- Tax Module:
- Calculates tax based on slabs
    - Output Module:
    - Displays final tax amount

TECHNICAL TEAM

Java Programming
Project Presentation

Algorithm / Flowchart

- Start
- Input income details
- Input deduction details
- Calculate taxable income
- Apply tax slabs
- Calculate total tax
- Display result
- Stop

```
┌──────────────┐
│   Start   │
└──────┬───────┘
       │
       ▼
┌──────────────────┐
│  Input Income  │
└──────┬───────────┘
       │
       ▼
┌──────────────────────┐
│  Input Deductions  │
└──────┬───────────────┘
       │
       ▼
┌──────────────────────────┐
│ Calculate Taxable Income│
│  (Income - Deduction)   │
└──────┬───────────────────┘
       │
       ▼
┌──────────────────────────┐
│    Apply Tax Rate      │
│  (Based on condition)  │
└──────┬───────────────────┘
       │
       ▼
┌──────────────────────────┐
│      Display Tax       │
└──────┬───────────────────┘
       │
       ▼
┌──────────┐
│   End   │
└──────────┘
```

TECHNICAL TEAM

Java Programming
Project Presentation

Implementation

- Classes and Objects
- Conditional statements (if-else)
- Loops
- Methods
- Scanner class for input

```java
import java.util.*;

public class TaxCalculator {
    public static void main(String[] args)
{
        Scanner sc = new
Scanner(System.in);

        System.out.print("Enter Income: ");
        double income = sc.nextDouble();

        System.out.print("Enter Deductions:
");
        double deduction = sc.nextDouble();

        double taxableIncome = income -
deduction;
        double tax = 0;

        if (taxableIncome <= 250000)
            tax = 0;
        else if (taxableIncome <= 500000)
            tax = taxableIncome * 0.05;
        else if (taxableIncome <= 1000000)
            tax = taxableIncome * 0.2;
        else
            tax = taxableIncome * 0.3;

        System.out.println("Tax: " + tax);
    }
}
```

Java Programming
Project Presentation

Output Screens

```
Enter Income: 600000
Enter Deductions: 100000
Tax: 25000.0
```

Explanation (short):

Income = 600000

Deductions = 100000

Taxable Income = 500000

Since taxable income is ≤ **500000**, tax rate = **5%**

Tax = **500000 × 0.05 = 25000.0**

TECHNICAL TEAM

Java Programming
Project Presentation

Results & Discussion

- Accurate tax calculation
- Faster than manual method
- Easy to use
- Challenges:
- Understanding tax slabs
- Handling edge cases

TECHNICAL TEAM

Java Programming
Project Presentation

Conclusion & Future Enhancement

- Project successfully calculates income tax
- Reduces errors and saves time
- Demonstrates Java and OOP concepts

Future Enhancements

- Add GUI (Swing / JavaFX)
- Use database (MySQL)
- Add login system
